### ***Coalition of California groups recommend tech actions on climate***

The Southern California Association of Governments and the California Emerging Technology Fund, in partnership with the Los Angeles Digital Equity Action League, is targeting vehicle emissions with a series of recommendations to increase broadband adoption and allow for work from home.

The California Air Resources Board has assigned to SCAG a target of reducing greenhouse gases by 19% from 2005 levels by 2035.

The groups say that depending on the scope and speed of action, their region may be able to reduce its GHG emissions by up to 15%.
